DISCUSSION: Datasets, projects, and teams

Discuss

This is an opportunity to find team mates for your project. If you have an interesting idea, make a post about it. If you find an interesting project that someone posted about, show your interest by replying to them. If you found an interesting dataset that is relevant to a project or you think can be helpful, share it here and explain how you think it could be useful.

For some ideas of datasets, check Kaggle.com, UCRStar.com, and Data.gov.

Guidelines

Each student should either start a discussion or reply to an existing discussion. Either way, your message should be between 50 and 100 words. Please avoid boilerplate messages that do not add much, e.g., "This is a great idea." or "I am interested in this project." Provide some reasons of why you think this is a good project to initiate the discussion.
